Arman Naseri Far

Software Developer · Full-stack web apps and AI tools

Turin, Italy · +39 351 332 5832 · arman.naserfar@gmail.com · linkedin.com/in/arman-naseri-far-5773b3341 · github.com/Armannss · armannss.github.io/portfolio

SUMMARY

Computer Engineering student at Politecnico di Torino who builds web products end to end, from the data model and API to the interface and deployment. Experience with TypeScript, Next.js and PostgreSQL, and with AI assistants and developer tools.

EXPERIENCE

Research Intern, SONIC Lab, Department of Electronics and Telecommunications, Politecnico di Torino — May 2026 – Present

MEVO, a networked music performance system. Supervisor: Prof. Cristina Rottondi. Working with Dr. Leonardo Severi and Dr. Matteo Sacchetto.

- Extended a remote-conducting system that links a conductor in a Meta Quest headset to musicians in a browser over WebRTC, across a Unity VR app, a Unity WebGL view and Node.js and Fastify services.
- Built the shared rehearsal hall, six selectable avatars, a seating plan with taken seats, name labels, head look-at and arm IK playing poses that follow the rehearsal timer.
- Added per-musician round-trip time to the conductor's view, so connection quality is visible in the headset.

Independent Software Developer — Nov 2025 – Present

NEXTRIBE · Persian personal-growth platform · nextribe.app — Oct 2026 – Present

- Designed and built a public website and an installable web app, covering 71 pages, 24 API routes and 77 database models on PostgreSQL and Prisma.
- Built daily missions across six life areas, planning, progress charts and a tribe leaderboard ranked by progress toward each member's own goal.
- Added an onboarding safety step that hides unsuitable missions, and kept mood, journal and safety answers out of anything the tribe can see.
- Built member administration, personal Web Push reminders and a Telegram bot for membership applications.

Parsilon Part · Auto parts online shop with an AI assistant — May 2026 – Oct 2026

- Built an AI parts assistant on the Claude API with tool use. It searches the live catalogue, checks price and stock, and shows matching parts as cards, with read-only access so it cannot place orders or see accounts.
- Built search, filters, product pages with compatible cars, cart, checkout, order tracking, wholesale requests and an admin panel with sales reports.

Belvia Order Calculator · Internal tool for Belvia Online Shop · armannss.github.io — Nov 2025 – Oct 2026

- Built a bilingual Persian and English web app that calculates discounts, shipping by weight and totals in three currencies as the user types, and creates a printable invoice.

Jetaime · Internal tools and website for a pastry brand — Nov 2026 – Present

- Set up a monorepo with a cost, price list and invoice tool plus a public website, and gave the website a restricted database role so costs and recipes stay out of its reach.

PROJECTS

armap · Open-source Claude Code plugin · github.com/Armannss/armap — Oct 2026

- Ranks files with PageRank over a dependency graph and gives AI agents a compact code map within a token budget, with imports resolved for 15 languages and no runtime dependencies.
- In a small pilot (one project, five questions, two runs each), total tokens fell 20%. Multi-step questions saved 35% to 48%, and simple lookups cost 2% to 5% more.

Armanly · Offline English learning app · armannss.github.io/speak-and-learn — Sep 2026 – Oct 2026

- Built 29 lessons covering 151 expressions, with spaced-repetition flashcards and timed speaking drills. It works offline and stores all progress on the device.

EDUCATION

B.Sc. in Computer Engineering, Politecnico di Torino, Turin, Italy — Sep 2023 – Present

B.Sc. in Materials Science and Engineering, Sharif University of Technology, Tehran, Iran — Sep 2019 – Jun 2023

SKILLS

Languages: TypeScript, JavaScript, Python, C#, C, SQL, MATLAB, HTML, CSS

Web and data: Next.js, React, Tailwind CSS, Node.js, Fastify, PWA, RTL interfaces, PostgreSQL, Prisma, Drizzle

AI and real-time: Claude API with tool use, Claude Code plugins, WebRTC, WebSocket, Web Push, Unity, Meta Quest

Tools: Git, Vercel, GitHub Pages, Docker

Spoken languages: Persian (native), English (TOEFL 97), Italian (basic)
